Web Auditor & Architectural Scorecard

Multi-Domain Performance Benchmarking, Web Standards Compliance & Legacy Debt Analysis • October 21, 2026

Target Domains	Avg Functionality	Speed Grade A/B	Sites with Critical Issues
4 Sites	**63.2%**	**3 / 4**	**2 Sites**

1. Executive Summary Matrix

Comparative technical benchmark across all evaluated domains, capturing server latency grades, normalized functionality ratings, stack fingerprinting, and top remediation focus.

Target Domain	Speed	Score	Protocol	Technology Stack	Top Remediation Priority
example.com	**Grade A** (0.48s)	**88%**	HTTPS	Modern Web Stack, Custom Framework	Deploy Content-Security-Policy (CSP)
northwind-dental.example	**Grade B** (0.82s)	**65%**	HTTPS	WordPress 6.3, nginx	Bind Explicit Labels to 1 Form Input(s)
insecure-legacy-site.example	**Grade D** (1.68s)	**0%**	**HTTP (Insecure)**	Apache 2.2, PHP 5.4	Implement HTTPS / SSL Encryption
apex-consulting.example	**Grade A** (0.34s)	**100%**	HTTPS	Next.js 14, React	Fully compliant; routine monitoring

2. Individual Domain Diagnostics & Action Plans

In-depth inspection per audited endpoint, itemizing infrastructure performance, standard compliance, and prioritized architectural remediation actions.

#1. example.com — Example Domain Benchmark

Response Latency:	0.48s (Grade A)	**Functionality Score:**	**88%**
SSL / Encryption:	Enforced (HTTPS)	**Mobile Viewport:**	Configured
Image Accessibility:	7/8 with alt tags	**Form Accessibility:**	All inputs labeled
Detected Tech:	Modern Web Stack, Custom Framework	**Legacy Markup:**	None detected

Prioritized Action Plan:

Priority	Category	Action & Architectural Remedy
High	**Security**	**Deploy Content-Security-Policy (CSP)** Missing CSP leaves the application vulnerable to cross-site scripting (XSS) and unauthorized script injection. Configure a robust CSP header.
Medium	**Accessibility (WCAG 2.1)**	**Add Alt Text to 1 Unlabeled Image(s)** Screen readers cannot announce image content without descriptive alt attributes. Use empty alt="" for decorative graphics.

#2. northwind-dental.example — Northwind Dental Care - Family & Cosmetic Dentistry

Response Latency:	0.82s (Grade B)	**Functionality Score:**	**65%**
SSL / Encryption:	Enforced (HTTPS)	**Mobile Viewport:**	Configured
Image Accessibility:	22/25 with alt tags	**Form Accessibility:**	1 unlabeled
Detected Tech:	WordPress 6.3, nginx, PHP 8.1	**Legacy Markup:**	None detected

Prioritized Action Plan:

Priority	Category	Action & Architectural Remedy
Critical	**Accessibility**	**Bind Explicit Labels to 1 Form Input(s)** Placeholder attributes disappear on input and are unannounced by screen readers. Link inputs to visible label elements.
High	**Security**	**Deploy Content-Security-Policy (CSP)** Missing CSP leaves the application vulnerable to cross-site scripting (XSS) and unauthorized script injection. Configure a robust CSP header.
High	**Security**	**Enable Strict-Transport-Security (HSTS)** Configure HSTS with max-age=31536000 to prevent SSL stripping attacks during initial connection negotiation.
High	**Accessibility (WCAG 2.1)**	**Add Alt Text to 3 Unlabeled Image(s)** Screen readers cannot announce image content without descriptive alt attributes. Use empty alt="" for decorative graphics.

#3. insecure-legacy-site.example — Legacy Operations Portal

Response Latency:	1.68s (Grade D)	**Functionality Score:**	**0%**
SSL / Encryption:	**Unencrypted (HTTP)**	**Mobile Viewport:**	**Missing Viewport**
Image Accessibility:	6/14 with alt tags	**Form Accessibility:**	3 unlabeled
Detected Tech:	Apache 2.2, PHP 5.4, Legacy CMS	**Legacy Markup:**	, <font>, <marquee>

Prioritized Action Plan:

Priority	Category	Action & Architectural Remedy
Critical	**Security**	**Implement HTTPS / SSL Encryption** The site transmits unencrypted traffic over plain HTTP. Obtain an SSL/TLS certificate and enforce automatic 301 redirects to HTTPS.
Critical	**Mobile Responsiveness**	**Add Mobile Viewport Meta Tag** Missing viewport meta tag causes mobile browsers to render desktop layouts. Add viewport tag with width=device-width.
Critical	**Accessibility**	**Bind Explicit Labels to 3 Form Input(s)** Placeholder attributes disappear on input and are unannounced by screen readers. Link inputs to visible label elements.
High	**Security**	**Deploy Content-Security-Policy (CSP)** Missing CSP leaves the application vulnerable to cross-site scripting (XSS) and unauthorized script injection. Configure a robust CSP header.
High	**Accessibility (WCAG 2.1)**	**Add Alt Text to 8 Unlabeled Image(s)** Screen readers cannot announce image content without descriptive alt attributes. Use empty alt="" for decorative graphics.
High	**Performance**	**Optimize Server Response Latency (1.68s TTFB)** High time-to-first-byte exceeds recommended thresholds (>1.0s). Leverage server-side caching, OPcache, and CDN edge distribution.
Medium	**Security**	**Configure X-Frame-Options** Set X-Frame-Options to SAMEORIGIN or DENY to prevent third-party domains from embedding pages inside malicious iframes.
Medium	**Markup Hygiene**	**Refactor Deprecated HTML Tags: , <font>, <marquee>** Legacy styling tags violate modern W3C HTML5 standards and impede responsive styling. Replace with modern CSS Flexbox/Grid rules.

#4. apex-consulting.example — Apex Systems - Enterprise Strategy & Cloud Consulting

Response Latency:	0.34s (Grade A)	**Functionality Score:**	**100%**
SSL / Encryption:	Enforced (HTTPS)	**Mobile Viewport:**	Configured
Image Accessibility:	12/12 with alt tags	**Form Accessibility:**	All inputs labeled
Detected Tech:	Next.js 14, React, Cloudflare CDN	**Legacy Markup:**	None detected

✔ **No critical issues detected.** Infrastructure conforms to baseline standards.
